Dr. Rossen will discuss the topic of human habitation in the Western Hemisphere, the boundaries of longitudinal timeframes on the ideas of habitation, and evidence that breaks the time barrier of Clovis period archaeological sites. As a graduate student at the University of Kentucky, Dr. Rossen worked at the Monte Verde dig site in Chile which helped to frame the existence of humans pre-dating the Clovis period of human existence.

Wednesday, September 26, 2007
4:15 pm, 27 Persson Hall Auditorium

Sponsored by Core Cultures, Native American Studies Program, and the Sociology and Anthropology Department
