The above-referenced Colgate University residential buildings are equipped with sprinkler systems and smoke and/or heat detection devices, including in sleeping areas, kitchens, hallways, and common areas. These detection devices report to a building fire alarm control panel that transmits alarm activations to a supervising station that is staffed 24 hours a day at Campus Safety. As per New York State fire code, the supervising station reports general alarm activations to the Madison County 911 Dispatch Center which, in turn, initiates local fire department response. In addition, a Campus Safety officer is deployed to investigate alarm activations. This document is provided pursuant to the requirements of New York State Education Law Section 6438 (the Kerry Rose Fire Sprinkler Notification Act). The entire annual Colgate University Fire Safety Report required by the federal Higher Education Opportunity Act can be accessed via the Colgate Clery Compliance webpage.
